

1. Open website: [Miniconda — Conda documentation](#)
2. Download miniconda, depending on your system.
3. Install miniconda, by clicking on the file you download. Click on “Next” for all steps and then click on “install”. Do not make any change on installation options.
4. Find “Anaconda Powershell Prompt” from Windows start menu.

5. Right click on the white title part of the powershell prompt and select “Properties”

6. Adjust the size and color of the prompt window
7. Type “conda install numpy matplotlib” on the command line and click Enter

8. After getting ready, it will ask whether you want to process. Enter ‘y’ from your keyboard and click Enter. It will then install python related packages.
9. Type “conda install git” on the command line and Enter; then, select ‘y’ to process to install git.
